New look for the Clap!3D flooring by Déco: The Hungarian Herringbone

The **Clap!3D cladding line by Déco** is enhanced with the new **Hungarian herringbone** motif, an elegant variation of the Italian herringbone, already in the collection.

Made up by **slats cut at 60-degree angles**, this installation creates a **dynamic and refined pattern that gives depth to rooms**. It is suitable for traditional settings, emphasising warmth and elegance, and for modern interiors, which take on a unique charm.

With the addition of the Hungarian herringbone pattern to its offerings, Déco offers interior designers a new product that, by dividing up spaces by a consistent pattern, makes them appear more sophisticated and larger.

Clap!3D flooring is made with **recycled polymers and stone**, so that each slat, with its texture and expertly studied effects, looks **three-dimensional, resistant, quite thin (only 5.5 millimetres), extremely practical** and with superior performance compared to traditional flooring systems.

Clap!3D has also been designed to ensure **quick and trouble-free installation**: it can be installed with interlocking dry laying on screed or directly on an existing floor, it is immediately walkable and can also be **applied on radiant panels**, offering a degree of heat absorption and diffusion even much higher than other materials.

Cleaning does not require any special precautions, it is simple and quick, a neutral detergent is sufficient.

Clap!3D Hungarian herringbone is a solution that is classic in terms of style and contemporary when it comes to technology, as it allows to achieve robustness and very high performance.

The planks are available in **six finishes**; a rich collection that addresses contemporary needs.

In addition to the new Hungarian herringbone, Clap!3D is available in the Italian herringbone, Doga Max, Doga S and Multiformat formats.

Hungarian herringbone slat dimensions: 5.5 x 127 x 762 mm

Finishes: Pinna, Takla, Eureka, Yadan, Rub and Namib
