

## Clap!WALL by Déco is expanding with new interior wall claddings: introducing Clap!WALL Panels, large-scale "marble effect" panels

The family of Clap!WALL interior wall claddings by Déco is expanding with **Clap!WALL Panels, large-scale vertical panels with a marble effect.**

This new product is designed to offer large vertical surfaces the quality, practicality and elegant aesthetic that defines the Clap!WALL collection, which also includes Clap!WALL Board wood-effect slats and Clap!WALL Tiles in stone, marble and concrete effect.

With the addition of this variant, Déco is able to meet the different design needs of architects and interior designers, offering a wide range of high-performance solutions, adapted to residential, public or contract spaces.

**Clap!WALL Panels**, which have **reduced thickness (4mm)** and maxi dimensions (1100x2800 mm), are made with the innovative **mix of stone and recycled polymers** that distinguishes the whole Clap! collection, also in its floor variants.

A state-of-the-art *compound* that guarantees **technical features and high performance**, including ultra-realism and stability. The cladding is also waterproof and easy to clean.

Clap!WALL Panels are also **easy to position**; the visibility of seams can be altered depending on installation requirements and aesthetic preferences: the panels can be installed close together, minimising the grout line between the pieces.

With **matte or glossy finishes**, Clap!WALL Panels explore the **most elegant shades of marble**: from **Grigio Carnico** to **two variants of Bianco Calacatta** and intense **black**, perfect for creating exclusive, modern contrasts.
