## Easyclip by Déco

### The new patented interlocking fixing for Ultrashield® Stilo sunshades

Ultrashield® Stilo is the collection of profiles designed to offer architects and designers the possibility of creating unique and tailor-made sunshade screens for each project.

The profiles can be installed horizontally, vertically, tilted, in stationary, sliding or mobile mode. Installed outdoor, they yield a notable aesthetic result and pleasant shading, also increasing the insulation coefficient and optimising the thermal comfort and energy performance of buildings. Installed indoor, they are ideal for separating and furnishing spaces with warmth and elegance.

Today, thanks to the company's revolving research, Déco has patented the **Easyclip interlocking fixing system** for the **Ultrashield® Stilo S sunshades** (60x42x3000 mm), which ensures an extremely easy and quick installation, eliminating profiles and frames, for a clean and essential installation flush with floor and ceiling. Ideal for modern and minimalist projects, it guarantees impeccable aesthetics and unprecedented structural simplicity.

The system comprises two bases that can be fixed to ceiling and floor, each equipped with recesses for the placement of dowels anchored directly to the internal core of the Stilo profiles. The addition of a pin in the bases ensures fixing and stability, without hindering the possibility of freely orienting the sunshades.

Thanks to the properties of the Ultrashield® composite wood, Stilo features a special polymer shield, extruded together with the internal product mix, which protects from the elements and stresses, thus making the product durable and immune to colour fading over time, resistant to scratches and stains, and maintenance-free.
