

Déco presents the meeting between Nova and Moove.Zen

The emotion of light combines with the purity of sound

The Nova integrated LED lighting line now extends to the Moove.Zen collection, combining warmth and emotion of light with purity of sound.

With this new interior solution, Déco **combines the acoustic comfort of Moove.Zen sound-absorbing claddings with the Nova system**, in order to optimise the acoustic and lighting performance of environments with a single product, and to give life to new creative visions.

Nova's LED strips, perfectly integrated between the Moove.Zen profile slats, transform the cladding into a functional and decorative element, capable of reinventing spaces with style.

The **modular symmetries of Moove.Zen profiles** are crafted to **diminish echoes** in spaces and elevate the overall sound quality in any context. The porous structure at the base of the slats enables sound waves to be absorbed into the panel surface rather than reflected, effectively minimising any background noise.

Each slat is coated on all visible sides with wood sheets, ensuring an **elegant and natural stylistic result**. The available wood types span from the warm tones of natural oak to the enveloping nuances of walnut, and culminate in the sophistication of teak.

Furthermore, special closing profiles define the system so as not to leave any visible cuts.

Nova is fitted inside the Moove.Zen grooves with LED strips (8, 12 and 16 W) customisable for light temperature and dimmable; all adjustable via app, remote control, switch or voice assistant.

No cables are visible and no invasive installation is required: by choosing the installation method on a substructure, the electrical component of the LED remains hidden in the gap created between wall and cladding, preserving a clean design.

Nova Moove.Zen - details

Profiles

OLIMPO

With its curved lines and inspiration drawn from one of the world's highest peaks, it acquires a unique identity, making it a captivating choice for those in search of an original touch in space decoration.

ETNA

It embodies the intrinsic elegance of geometric simplicity. Made up of regular square slats, it offers a clean and contemporary design, adding a touch of refinement to any space.

KAPPA

Made up of wide squared slats, it stands out for its solid and well-defined geometric regularity, capable of furnishing spaces with precision and visual strength.

Light

Warm, Neutral and Cold – Dimmable

Finishes

Teak, Walnut, Cedar, Red Cedar and Charcoal
