(*1) The instructions given at the end of the catalog should be strictly followed when installing the product.
(*2) Particular environmental conditions or friction with other non-conductive materials could originate electrostatic phenomena, which should be considered normal due to the polymeric nature of the material
These phenomena are subject to reduction with normal product wear and tear and are containable with the use of specific antistatic sprays.
NOTES:

- Technical data are subject to change without prior notice.
- Different production batches may exhibit shading, even strong shading, between different batches of goods

A tolerance of $+/-2 \%$ in slat dimensions is to be considered acceptable.
